INDEX TO AUTHORS.

A

Ackerson, C. W., Blish, M. J., and Mussehl, F. E. A study of the phosphorus, calcium, and alkaline reserve of the blood sera of normal and rachitic chicks, 75

Adair, G. S. The hemoglobin system. I. Classification of reactions, 493

—. II. Theory of reactions which do not obey the law of constant proportions, 499

—. III. The equilibrium of hemoglobin and carbon dioxide, 503

—. IV. The reproduction of the carbon dioxide curves of blood with an artificial mixture of hemoglobin and sodium bicarbonate, 515

—. V. The relation of hemoglobin and bases, 517

—. VI. The oxygen dissociation curve of hemoglobin, 529

Allin, Kathleen Drew. See Harding, Allin, Eagles, and Van Wyck, 37, p. xlix

Alsberg, C. L., and Perry, E. E. Further studies on the effect of fine grinding upon starch grains, p. lxvi

—. See Dill and Alsberg, p. lxvii, p. lxviii

Alsberg, C. L. See Field and Alsberg, p. xlii

Anderson, William E. The influence of diet on fat production in the animal body, p. xlvi

Andrews, James C. The optical activity of cystine, p. xx

Austin, W. C., and Boyd, T. E. On the nature of urinary glucose, p. xxii

Austmann, K. J. See Cameron and Moorhouse, 687

B

Barkus, Otakar. See Morgulis and Barkus, p. lxviii

Baumann, Emil J., and Holly, Olive M. The influence of infection on the lipoids of the suprarenal gland, p. lxiii

Beard, H. H. See Cowgill, Smith, and Beard, p. xxiii

Becker, J. Ernestine. See McCollum, Simmonds, and Becker, 547

—. See McCollum, Simmonds, Becker, and Bunting, 553

Benson, C. C. Chemical change in fish muscle during rigor mortis, p. lxxii

Berglund, Hilding, and Ni, Tsang G. Types of toler-

XUM

ance for different carbohydrates (galactose, pentoses), p. xlviii

Best, Charles H., and **Ridout, J. H.** Observations on blood lactic acid after insulin, 197

Bethke, R. M., Kennard, D. C., and **Kik, M. C.** Nutritional studies of the growing chick. I. The relation of sunlight and green clover to leg weakness in chicks, 377

Black, A. See STEENBOCK, BLACK, NELSON, NELSON, and HOPPERT, p. xxv

Blatherwick, N. R., and **Maxwell, L. C.** A method for purifying insulin, p. lxxiv

Blish, M. J. See ACKERSON, BLISH, and MUSSEHL, 75

Bliss, Sidney. See FOLIN and BLISS, p. lxxiv

—. See FOLIN, DRINKER, and BLISS, p. lxxiv

Bloor, W. R. The fatty acids of blood plasma, p. xlv

—. Plasma lipoids in experimental anemia, 1

Bock, A. V. See ADAIR, 493, 499, 503, 515, 517, 529

Bock, Joseph C., and **Gilbert, Max.** On the determination of non-protein nitrogen in very small amounts of blood, p. xxxix

Bodansky, Aaron. On the relation of the thyroid to the effects of insulin, p. lxvi

Bodansky, Meyer. The distribution of the unsaturated fatty acids, cholesterol, and cholesterol esters in experimental anemia, p. lvi, 239

Bolliger, A., and **Hartman, F. W.** Observations on blood phosphates as related to carbohydrate metabolism, p. lvi

Boothby, Walter M., and **Weiss, Robert.** The effect of insulin on the respiratory metabolism, p. l

Borsook, Henry, and **Wasteneys, Hardolph.** The enzymatic synthesis of protein. IV. The effect of concentration on peptic synthesis, 563

—. See WASTENEYS and BORSOOK, 575

Boyd, T. E. See AUSTIN and BOYD, p. xxii

Boyden, Ruth E. See OKEY, p. xxxiii

Bradley, H. C. See HERTZMAN and BRADLEY, p. xxxvii

Briggs, A. P. See DOISY, BRIGGS, WEBER, and KOECHIG, p. xlviii

Bulmer, Frederick M. R., Eagles, Blythe Alfred, and **Hunter, George.** Uric acid determinations in blood, 17

Bunting, R. W. See MCCOLLUM, SIMMONDS, BECKER, and BUNTING, 553

C

Cameron, A. T., and **Moorhouse, V. H. K.** The tetany of parathyroid deficiency and the calcium of the blood and cerebrospinal fluid, 687

Cannon, Helen C. See Osborne and Mendel, 233

Carrick, Carey W., and **Hauge, Sigfred M.** Presence of the antiscorbutic substance in the livers of chickens fed on scorbutic diets, 115

Cerecedo, Leopold R. See Muenzen, Cerecedo, and Sherwin, p. xvi

Chaikoff, I. L., Macleod, J. J. R., and **Markowitz, J.** Further data on the metabolism of depancreatized dogs kept alive with insulin, p. lxxi

Chambers, W. H. See Deuel and Chambers, p. xxii

Clark, E. P., and **Collip, J. B.** A study of the Tisdall method for the determination of blood serum calcium with a suggested modification, 461

—. See Collip, Clark, and Scott, 439

Clark, Guy W. Mineral metabolism of adult man, p. xxviii

Clark, W. Mansfield, Cohen, Barnett, and **Gibbs, H. D.** An interpretation of the biological reduction of methylene blue, p. liv

Clayton, M. M. See Mattill and Clayton, p. xxvii

Clowes, G. H. A., and **Walden, Eda B.** On specific sperm agglutinins, p. lxiv

Coghill, Robert D. See Johnson and Coghill, 225

Cohen, Barnett. See Clark, Cohen, and Gibbs, p. liv

Cohn, Edwin J. Physicochemical methods of characterizing proteins. VII. The molecular weights of the proteins, p. xv

—, **Hendry, Jessie L.,** and **Prentiss, Adela M.** Studies in the physical chemistry of the proteins. V. The molecular weights of the proteins. Part 1. The minimal molecular weights of certain proteins, 721

Collins, Arnold M. See Jacobs and Collins, 123

Collip, J. B. The extraction of a parathyroid hormone which will prevent or control parathyroid tetany and which regulates the level of blood calcium, 395

—, **Clark, E. P.,** and **Scott, J. W.** The effect of a parathyroid hormone on normal animals, 439

—. See Clark and Collip, 461

Cook, Kenneth G. See Rose and Cook, p. xvii

Cori, Carl F. The influence of insulin and epinephrine on the lactic acid content of blood and tissues, p. liii, 253

Cowgill, George R., Smith, Arthur H., and **Beard, H. H.** Quantitative aspects of the function of vitamin B in several species, p. xxiii

D

Daniels, Amy L., and **Hutton, Mary K.** Mineral deficiencies of milk as shown by growth and fertility of white rats, 143

Dauphinee, James A. See Hunter and Dauphinee, p. xxxix

Deuel, H. J., Jr., and Chambers, W. H. The rate of elimination of various ingested monosaccharides in phlorhizin diabetes, p. xxii

Dill, D. B., and Alsberg, C. L. A modification of the method of preparing gliadin, p. lxvii

— and —. The specific rotation of gliadin in EtOH-H_2O solutions, p. lxviii

Doisy, Edward A., Briggs, A. P., Weber, C. H., and Koechig, Irene. The formation of lactic acid by the diabetic organism, p. xlviii

— and **Ralls, J. O.** The influence of the hormone of the ovarian follicle on the basal metabolism of the rat, p. lxxiv

Domogalla, B. P., Juday C., and Peterson, W. H. The forms of nitrogen found in certain lake waters, 269

—. See Peterson, Fred, and Domogalla, p. xl, 287

Dow, Odessa D. See Supplee and Dow, 103

Drinker, Cecil. See Folin, Drinker, and Bliss, p. lxxiv

Dunwiddie, Jeannette. See Wang, Kern, Frank, and Dunwiddie, p. lxi

E

Eagles, Blythe Alfred. See Bulmer, Eagles, and Hunter, 17

Eagles, Blythe Alfred. See Harding, Allin, Eagles, and Van Wyck, 37, p. xlix

Emmett, A. D., and Peacock, Gail E. Adequacy of pigeons and rats for vitamin B studies, p. xxiii

Erikson, Statie E. See Okey, p. xxxiii

F

Field, H., Jr. See Adair, 493, 499, 503, 515, 517, 529

Field, John, 2nd, and Alsberg, C. L. A study of the birefringence and the staining of agar-agar and of gelatin, p. xlii

Fiske, Cyrus H., and Sokhey, S. S. Ammonia and fixed base excretion after the administration of acid by various paths, 309

Folin, Otto, and Bliss, Sidney. The site of ammonia formation, p. lxxiv

—, **Drinker, Cecil, and Bliss, Sidney.** The destruction of uric acid in perfusion experiments, p. lxxiv

Frank, Margaret. See Wang, Kern, Frank, and Dunwiddie, p. lxi

Fred, E. B. See Peterson, Fred, and Domogalla, p. xl, 287

Freeman, Benjamin. See Nelson and Freeman, 365

Friedemann, Theodore E. The reaction of acetoacetic acid with the hexoses, p. xxi

INDEX TO SUBJECTS.

A

Acetone bodies:
Blood (HUBBARD and NOBACK) 391
Urine (HUBBARD and NOBACK) 391
Acid(s):
Administration, ammonia excretion (FISKE and SOKHEY) 309
—, fixed base excretion (FISKE and SOKHEY) 309
Buffer mixtures prepared without use (KOLTHOFF) 135
Sea water (IRVING) 767
Sulfocarboxylic acids, rotations (LEVENE and MIKESKA) 85
Thiocarboxylic acids, rotations (LEVENE and MIKESKA) 85
Adenine:
Alfalfa (VICKERY and LEAVENWORTH) 579
Nucleotide from blood (HOFFMAN) 675
Adenine nucleotide:
Blood (HOFFMAN) 675
Alfalfa:
Adenine (VICKERY and LEAVENWORTH) 579
Alfalfa—*continued:*
Nitrogenous constituents (VICKERY and LEAVENWORTH) 579
Alkali:
Dextro-alanyl-dextro-alanine anhydride (LEVENE and PFALTZ) 661
Alkaline reserve:
Blood serum (ACKERSON, BLISH, and MUSSEHL) 75
Amino acid(s):
Water, lake (PETERSON, FRED, and DOMOGALLA) 287
2-Aminohexonic acid(s):
Configuration (LEVENE) 95
2-Aminohexose(s):
Configuration (LEVENE) 95
1-Amino-2-hydroxy-*n*-heptadecane:
(LEVENE and HALLER) 669
Ammonia:
Acid administration (FISKE and SOKHEY) 309
Anaphylaxis:
Lymph in anaphylactic shock (PETERSEN and HUGHES) 179
Anemia:
Cholesterol (BODANSKY) 239
— esters (BODANSKY) 239

XUM

Anemia—*continued:*
Fatty acids, unsaturated (Bodansky) 239
Plasma lipoids (Bloor) 1
Anhydride:
Dextro-alanyl-dextro-alanine, action of alkali (Levene and Pfaltz) 661
Anhydrostrophanthidin(s):
Hydrogenation (Jacobs and Collins) 123
2, 5-Anhydrotetroxyadipic acid(s):
Stereochemistry (Levene and Simms) 351
Antiscorbutic substance:
Livers of chickens fed scorbutic diets (Carrick and Hauge) 115

B

Bacillus:
Tubercle, nitrogen in protein (Johnson and Coghill) 225
Base(s):
Buffer mixtures prepared without use (Kolthoff) 135
Excretion, fixed, after the administration of acid (Fiske and Sokhey) 309
Hemoglobin, relation (Adair) 517
Blood:
Acetone bodies (Hubbard and Noback) 391
Adenine nucleotide (Hoffman) 675
Calcium (Cameron and Moorhouse) 687
Blood—*continued:*
Calcium level, regulation by parathyroid hormone extraction (Collip) 395
Chlorides, intravenous injection (Whelan) 585
Hemoglobin and sodium bicarbonate mixture with, carbon dioxide curves (Adair) 515
Lactic acid after insulin (Best and Ridout) 197
— — content, influence of epinephrine (Cori) 253
— — —, influence of insulin (Cori) 253
Phosphoric acid compound (Greenwald) 339
Serum. *See* Serum.
Uric acid (Bulmer, Eagles, and Hunter) 17
— —, effect of high fat diets (Harding, Allin, Eagles, and Van Wyck) 37
Buffer:
Mixtures, prepared without use of acid (Kolthoff) 135
—, — — use of base (Kolthoff) 135
***d*-Butane-2-sulfonic acid:**
d-2-Mercaptobutane, oxidation to (Levene and Mikeska) 85

C

Calcium:
Blood (Cameron and Moorhouse) 687

Calcium—*continued:*
Blood, level, regulation by parathyroid hormone extraction (COLLIP) 395
— serum (ACKERSON, BLISH, and MUSSEHL) 75
— —, Tisdall method, modification (CLARK and COLLIP) 461
Cerebrospinal fluid (CAMERON and MOORHOUSE) 687
Calorimetry:
Clinical (LADD and RICHARDSON) 681
— (RICHARDSON and LEVINE) 465
Carbohydrate:
Renal glycosuria (LADD and RICHARDSON) 681
Carbonate:
Equilibrium, carbonic acid-carbonate, in sea water (IRVING) 767
Carbon dioxide:
Curves of blood with an artificial mixture of hemoglobin and sodium bicarbonate (ADAIR) 515
Hemoglobin and, equilibrium (ADAIR) 503
Carbonic acid:
Equilibrium, carbonic acid-carbonate, in sea water (IRVING) 767
Cerebrospinal fluid:
Calcium (CAMERON and MOORHOUSE) 687
Chloride(s):
Blood, intravenous injection (WHELAN) 585
Chloride(s)—*continued:*
Urine, intravenous injection (WHELAN) 585
Cholesterol:
Anemia (BODANSKY) 239
Irradiation, antirachitic value (HESS, WEINSTOCK, and HELMAN) 305
Cholesterol esters:
Anemia (BODANSKY) 239
Clover:
Leg weakness in chicks (BETHKE, KENNARD, and KIK) 377
Cresol red:
Serum, adsorption by, in spectrophotometric determination of pH (HIRSCH) 55
Cystine:
Nutrition (SHERMAN and MERRILL) 331

D

Dextro-alanyl-dextro-alanine anhydride:
Alkali, action (LEVENE and PFALTZ) 661

E

Enzyme:
Protein, enzymatic synthesis (BORSOOK and WASTENEYS) 563
—, — — (WASTENEYS and BORSOOK) 575
Epinephrine:
Lactic acid content of blood (CORI) 253
— — — of tissues (CORI) 253

XUM

Equilibrium:
Carbonic acid-carbonate, in sea water (IRVING) 767
Hemoglobin and carbon dioxide (ADAIR) 503

F

Fat:
Diets, high, effect on uric acid of blood (HARDING, ALLIN, EAGLES, and VAN WYCK) 37
Fatty acids:
Unsaturated, in anemia (BODANSKY) 239
Fluorine:
Diet, effect on teeth (MCCOLLUM, SIMMONDS, BECKER, and BUNTING) 553

G

***l*-Glyceric acid:**
Rotation (GREENWALD) 339
Glycosuria:
Renal, carbohydrate utilization (LADD and RICHARDSON) 681

H

Hederagenin:
(JACOBS) 631
Hemoglobin:
Bases, relation (ADAIR) 517
Carbon dioxide and, equilibrium (ADAIR) 503
Oxidations, tension of molecular oxygen (NEILL and HASTINGS) 479
Oxygen dissociation curve (ADAIR) 529
Hemoglobin—*continued:*
Reactions, classification (ADAIR) 493
—, not obeying the law of constant proportions, theory (ADAIR) 499
Sodium bicarbonate and, with blood, carbon dioxide curves (ADAIR) 515
System (ADAIR) 493, 499, 503, 515, 517, 529
Hydrochloride:
Tryptophane, colorimetric determination by vanillin-HCl reaction (KRAUS) 157
Hydrogenation:
Anhydrostrophanthidins (JACOBS and COLLINS) 123
Hydrogen ion:
Spectrophotometric determination (HIRSCH) 55

I

Indole:
Tryptophane, quantitative separation (KRAUS) 157
Insulin:
Blood lactic acid (BEST and RIDOUT) 197
Lactic acid content of blood (CORI) 253
— — — of tissues (CORI) 253
Trypsin (SCOTT) 641
Intoxication:
Water, mechanism (UNDERHILL and SALLICK) 61
Invertase:
Sucrose hydrolysis in presence of α-methyl glu-

XUM

Invertase—*continued:*
coside (NELSON and FREEMAN) 365
Irradiation:
Air, relative value in preventing rickets (HUGHES, NITCHER, and TITUS) 205
Cholesterol, antirachitic value (HESS, WEINSTOCK, and HELMAN) 305
Phytosterol, antirachitic value (HESS, WEINSTOCK, and HELMAN) 305
Ultra-violet, antirachitic properties imparted to inert substances (HESS and WEINSTOCK) 297

K

Ketone(s):
Infection and ketogenic balance (RICHARDSON and LEVINE) 465
Kidney:
Glycosuria, carbohydrate (LADD and RICHARDSON) 681

L

Lactic acid:
Blood, after insulin (BEST and RIDOUT) 197
—, influence of epinephrine (CORI) 253
—, — — insulin (CORI) 253
Tissues, influence of epinephrine (CORI) 253
—, — — insulin (CORI) 253
Light:
Ultra-violet, relative value in preventing rickets (HUGHES, NITCHER, and TITUS) 205
Lipoid(s):
Plasma, in anemia (BLOOR) 1
Liver:
Antiscorbutic substance (CARRICK and HAUGE) 115
Lymph:
Anaphylactic shock (PETERSEN and HUGHES 179

M

***d*-2-Mercaptobutane:**
d-Butane-2-sulfonic acid, oxidation (LEVENE and MIKESKA) 85
α-Methyl glucoside:
Sucrose hydrolysis by invertase (NELSON and FREEMAN) 365
Milk:
Mineral deficiencies (DANIELS and HUTTON) 143
Potency, dry milk, affected by oxidation (SUPPLEE and DOW) 103
Mineral:
Milk, mineral deficiency (DANIELS and HUTTON) 143

N

Nitrogen:
Alfalfa (VICKERY and LEAVENWORTH) 579
Protein of tubercle bacilli (JOHNSON and COGHILL) 225

XUM

Nitrogen—*continued:*
Water, lake (DOMOGALLA, JUDAY, and PETERSON) 269
—, — (PETERSON, FRED, and DOMOGALLA) 287
Nucleotide:
Adenine, from blood (HOFFMAN) 675

O

Oxygen:
Hemoglobin, oxygen dissociation curve (ADAIR) 529
Molecular, tension on oxidations of hemoglobin (NEILL and HASTINGS) 479
Tissues (KOEHLER) 475

P

Parathyroid:
Hormone (COLLIP, CLARK, and SCOTT) 439
— extraction, relation to level of blood calcium (COLLIP) 395
— —, — to parathyroid tetany (COLLIP) 395
Tetany of parathyroid deficiency (CAMERON and MOORHOUSE) 687
—, relation of parathyroid hormone extraction (COLLIP) 395
Pepsin:
Concentration, effect (BORSOOK and WASTENEYS) 563
Phenylhydrazine:
Pyrimidines, phenylhydrazino derivatives (LEVENE) 653
Phosphoric acid:
Blood (GREENWALD) 339
Phosphorus:
Blood serum (ACKERSON, BLISH, and MUSSEHL) 75
Phytosterol:
Irradiation, antirachitic value (HESS, WEINSTOCK, and HELMAN) 305
Plasma:
Lipoids in anemia (BLOOR) 1
Protein(s):
Chemistry, physical (COHN, HENDRY, and PRENTISS) 721
Enzyme synthesis (BORSOOK and WASTENEYS) 563
— — (WASTENEYS and BORSOOK) 575
Molecular weights, minimal (COHN, HENDRY, and PRENTISS) 721
Orange (SMITH) 71
Tubercle bacilli, nitrogen (JOHNSON and COGHILL) 225
Pyrimidine(s):
Phenylhydrazino derivatives (LEVENE) 653

R

Racemization:
(LEVENE and PFALTZ) 661
Rachitis:
See Rickets.

Renal:
See Kidney.
Rickets:
Alkaline reserve of blood serum (ACKERSON, BLISH, and MUSSEHL) 75
Antirachitic properties imparted by ultra-violet irradiation to inert substances (HESS and WEINSTOCK) 297
— value of irradiated cholesterol (HESS, WEINSTOCK, and HELMAN) 305
— — — irradiated phytosterol (HESS, WEINSTOCK, and HELMAN) 305
Calcium of blood serum (ACKERSON, BLISH, and MUSSEHL) 75
Irradiated air in preventing (HUGHES, NITCHER, and TITUS) 205
Phosphorus of blood serum (ACKERSON, BLISH, and MUSSEHL) 75
Ultra-violet light in preventing (HUGHES, NITCHER, and TITUS) 205

S

Salt(s):
Sulfocarboxylic acids, rotations (LEVENE and MIKESKA) 85
Thiocarboxylic acids, rotations (LEVENE and MIKESKA) 85
Sapogenin:
Soapnuts (JACOBS) 621
Saponin:
(JACOBS) 621, 631
Scurvy:
Antiscorbutic substance in livers (CARRICK and HAUGE) 115
Serum:
Blood, alkaline reserve (ACKERSON, BLISH, and MUSSEHL) 75
—, calcium (ACKERSON, BLISH, and MUSSEHL) 75
—, —, Tisdall method, modification (CLARK and COLLIP) 461
—, phosphorus (ACKERSON, BLISH, and MUSSEHL) 75
Spectrophotometric determination of pH, adsorption of cresol red (HIRSCH) 55
Skatole:
Tryptophane, quantitative separation (KRAUS) 157
Sodium bicarbonate:
Hemoglobin and, with blood, carbon dioxide curves (ADAIR) 515
Sphingosine:
(LEVENE and HALLER) 669
Strophanthin:
(JACOBS and COLLINS) 123
Sucrose:
Invertase, hydrolysis by, in presence of α-methyl glucoside (NELSON and FREEMAN) 365
Sulfocarboxylic acid(s):
Acids, free, rotations (LEVENE and MIKESKA) 85

XUM

Sulfocarboxylic acid(s)—*continued:*
Salts, rotations (LEVENE and MIKESKA) 85
Sunlight:
Leg weakness in chicks (BETHKE, KENNARD, and KIK) 377

T

Teeth:
See Tooth.
Tetany:
Parathyroid deficiency (CAMERON and MOORHOUSE) 687
—, relation of parathyroid hormone extraction (COLLIP) 395
Thiocarboxylic acid(s):
Acids, free, rotations (LEVENE and MIKESKA) 85
Salts, rotations (LEVENE and MIKESKA) 85
Tisdall method:
Blood serum calcium, modification (CLARK and COLLIP) 461
Tissue:
Lactic acid content, influence of epinephrine (CORI) 253
— — —, influence of insulin (CORI) 253
Oxygen consumption (KOEHLER) 475
Tooth:
Fluorine in diet (MCCOLLUM, SIMMONDS, BECKER, and BUNTING) 553
Trypsin:
(WASTENEYS and BORSOOK) 575
Insulin (SCOTT) 641
Tryptophane:
Indole, quantitative separation (KRAUS) 157
Skatole, quantitative separation (KRAUS) 157
Vanillin-HCl reaction, colorimetric determination (KRAUS) 157
Tubercle bacillus:
Nitrogen in protein (JOHNSON and COGHILL) 225
Tuberculinic acid:
Nitrogen in protein of tubercle bacilli (JOHNSON and COGHILL) 225

U

Uric acid:
Blood (BULMER, EAGLES, and HUNTER) 17
—, effect of high fat diets (HARDING, ALLIN, EAGLES, and VAN WYCK) 37
Urine:
Acetone bodies (HUBBARD and NOBACK) 391
Chlorides, intravenous injection (WHELAN) 585

V

Vanillin-HCl reaction:
Tryptophane, colorimetric determination (KRAUS) 157
Vitamin B:
(MCCOLLUM, SIMMONDS, and BECKER) 547

Vitamin B—*continued:*
Growth of rats (OSBORNE and MENDEL) 233
Vitamin E:
(Dietary complex, reproductive) solubility (SURE) 211

W

Water:
Acids, sea water (IRVING) 767
Water—*continued:*
Amino acids in lake water (PETERSON, FRED, and DOMOGALLA) 287
Intoxication, mechanism (UNDERHILL and SALLICK) 61
Nitrogen compounds, organic, in lake water (PETERSON, FRED, and DOMOGALLA) 287
— in lake water (DOMOGALLA, JUDAY, and PETERSON) 269

XUM
